ENTREPRENDRE
POUR LA
PLANÈTE

OUR MISSION

Our promise: one Vegipack product purchased, one petroleum-based product less.

Differentiate yourself with our unique solutions. It is currently the best alternative to traditional containers. The urgency to act is no longer to be demonstrated be part of the pioneers by adopting our solutions the planet will thank you and the world will remember you. Your vision can materialize.

You will be able in addition, to value a part of your waste by integrating them in your future Vegipack containers. Take part in the change today and create, with us, a new air.

WHO ARE WE?

We are two passionate nature lovers and men of action, with a desire to remove single-use plastic from the surface of the planet.

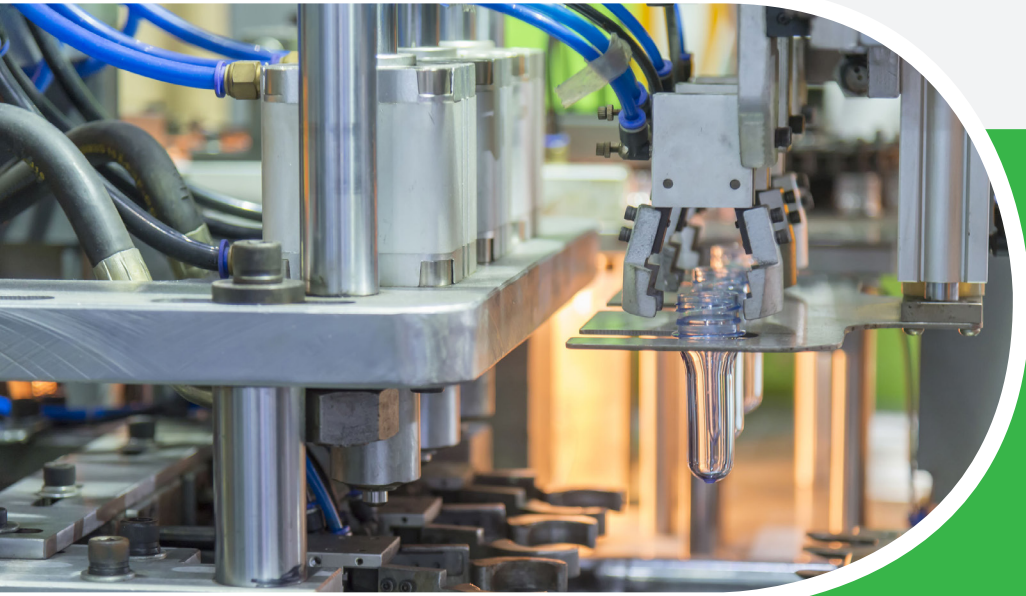

Our personal/professional experiences have pushed us to find new solutions. Fouad started the adventure more than 10 years ago, being the director of Schick Cartonage a cardboard factory in the Broye region he very quickly sought to propose ethical and eco-responsible packaging.

Massimo started with La Paille Verte, he wants to replace plastic straws in all shops/households in Switzerland.

Proposing reusable and biodegradable solutions. Knowing each other for a long time, sharing similar professional values, we wanted to launch a new project.

In order to join our experiences and to act as fast as possible to save our planet, together.

OUR EXPERIENCE AT YOUR SERVICE

With a wide range of experience in the field of sourcing ecological products we will give your project the utmost importance. Working directly with a production plant allows us to offer you a limitless development. Indeed, each solution requires a particular study in order to determine your needs and to answer them with an adapted solution.

For more than 2 years, we have studied and proposed to many customers, unique solutions. Both for private individuals and for large structures. Our first experience goes back to the end of 2019, with the marketing of a 100% vegetable reusable cup vegetable cup, the Vegicup.

Since then, we decided to find a solution to offer more innovation on a wider range of products. From now on, we can offer you a wide range of containers: bottles, flasks, jars, gourds, cups and more. Discover through our catalog, the available assortment.

LET'S TALK TECHNICAL!

Resulting from a unique process in the world, Vegipack products are of an unlimited innovation. Each product is composed mainly of sugar cane waste, the bagasse. A very little used waste that allows to valorize the end of life of this material.

The production system is very close to the PET bottles. This one being less energy consuming (-30% a -65%). Sugar cane granules are injected into a mold, at high pressure, to create the preform at the base of all containers. The preform is then hot-blown into a new mold to give it the desired shape (bottle, flask, jar..).

All Vegipack containers have very good mechanical resistance, oxidation resistance, Co2 loss resistance and up to Co2 and up to 40° Celsius temperature. This limitation in temperature resistance requires a filling after a complete steaming test.

All Vegipack products are EN13432 certified, European bio degradation standards. Certification recognized in Switzerland as well.

Your customers will be able to organize a specific collection for composting and not with the standard garbage cans. Most of the recycling centers collect our waste and are informed that it is not petroleum-based plastic. We will refer you to one of the recycling centers that are partners in our project.

VEGANBOTTLE

500ML

The Most Ecological Water Bottle In The World!

An ecological water bottle made from sugar cane, which is also compostable at the end of its life.

compostable at the end of its life. Veganbottle is a positive alternative to global plastic pollution. Veganbottle preserves fossil resources and avoids any toxicity for health or the environment.

Made without a drop of petroleum, this bottle helps protect the environment and our water in the best conditions, without endocrine disruptors.

Biodegradable and compostable. Moreover the product is as light and resistant as traditional plastics; easy to use.

Moreover, its end-of-life can be managed locally, through industrial composting facilities or domestic digesters a down-to-earth solution, avoiding the accumulation of plastic residues in the environment.

**ONE GOURDE
purchased is one tree planted.**

VEGICUP

◎ 250ML

AN Ecological Cup Made of 100% Vegetal Renewable Material

An ecological cup made of sugar cane, which is also compostable at the end of its life. Vegicup is a positive alternative to global plastic pollution.

Vegicup preserves fossil resources and avoids any toxicity to health or the environment.

Made without a drop of petroleum, this cup contributes to protect the environment and our water in the best conditions, without endocrine disruptors.

Biodegradable and compostable. Moreover, the product is as light and resistant as traditional plastics; easy to use.

Moreover, its end of life can be managed locally, thanks to industrial composting units or domestic digesters a solution from the earth to the earth, avoiding the accumulation of plastic residues in the environment.

**An ECOLOGICAL cup
made of 100% vegetal renewable material.**

Tips:

Soon available in Swiss biomass

OUR PLUGS

**You were wondering if our
corks are also vegetable?
The answer is YES!**

Although it was a challenge for our production unit, we wanted to offer a compostable solution from bottle to cap. A product of the earth, which returns to the earth.

True technological feats, they are available in all standard (PC028, 38 mm...) for bottles and custom-made for other products.

INTEGRATION OF CO-PRODUCTS

Another revolution that greatly enhances a resource that should not be underestimated: your waste!

We produce containers from waste, what about your waste?

Indeed, the majority of your waste is certainly incinerated. But very rarely valorized. Another point on which we can help you to better manage your environmental impact. We propose you to inject, in small quantities, the waste of your productions directly in your future containers.

For example, if you produce walnut oil, the waste will be composed of shells and walnut kernels. They can be reduced to dust (less than 250 microns) and we can propose you to inject them directly into your containers. This unique technique not only helps to reduce your waste but also to improve the quality of your products. Example of co-product injection environmental footprint but also gives a unique look to your containers. It will make them opaque, stronger and colored to match your content.

In some cases, it can even increase the resistance to UV, mechanical resistance and more.

“ Our Values And Commitments

The health of our planet is our priority, that's why Vegipack supports various associations & projects dedicated to ecological innovation.

WWF entreprendre pour la planète

Vegipack is a driving force in the Green Economy and demonstrates its commitment to the environment by being a member of the WWF.

Oceasciences Exploragyre

Project turned towards the challenges of tomorrow by 4 students of the Ecole Normale Supérieure in search of particles in the Atlantic Ocean.

Reforest'action

VZero greenhouse gas emissions program. Vegipack plants a tree for each bottle purchased to neutralize its carbon footprint.

Solar Impulse

Our production unit has been awarded the prestigious international SOLAR IMPULSE EFFICIENT SOLUTIONS label, which selects companies that offer sustainable and cost-effective solutions with a positive impact on the environment and quality of life.

THE LIFE CYCLE ASSESSMENT OF OUR PRODUCTS
